Domestic violence (DV) is a public health problem of epidemic proportions.¹

- 1 in 4 women in her lifetime is impacted by DV² and 1 in 7 men have been
  the victim of severe physical violence by an intimate partner.³ LGBTQ
  communities experience violence at similar or higher rates to that of
  heterosexual women.⁴ ⁵ ⁶ ⁷ ⁸ ⁹

- In addition to injuries, physical and psychological abuse are linked to a
  number of adverse health effects.¹⁰

- Medical costs of domestic violence and sexual assault (DV/SA) range from
  $2-7 billion annually.¹¹

Health centers are key to violence prevention.

Use this toolkit to build a comprehensive and sustainable response to domestic violence and sexual assault (DV/SA) in partnership with DV/SA advocacy programs (social service organizations) to:

→ Improve how your health center identifies and responds to DV/SA and promotes prevention, and

→ Develop proactive partnerships with local DV/SA advocacy programs to address the health
  needs of patients and connect them to health centers for care.

2. 2010 CDC National Intimate Partner and Sexual Violence Survey [https://www.cdc.gov/violenceprevention/nisvs/]
3. 2010 CDC National Intimate Partner and Sexual Violence Survey [https://www.cdc.gov/violenceprevention/nisvs/]
5. Landers S, Gilsanz P. The health of lesbian, gay, bisexual, and transgender (LGBT) persons in Massachusetts. Massachusetts Department of Public Health; 2009.
Health centers and DV/SA advocacy programs are natural partners given their shared mission to improve the health, wellness, and safety of their clients. Tools developed specifically for DV/SA advocacy programs to promote partnerships with health centers are also offered. Research indicates that IPV, sexual violence and stalking disproportionately impact women and experience severe health consequences. Therefore this toolkit primarily focuses on women, however the recommended interventions can be applied and adapted for men. The terms Intimate Partner Violence (IPV), Domestic Violence (DV) and Domestic and Sexual Assault (DV/SA) will be used interchangeably throughout this toolkit. Quotes from health centers and DV/SA agencies featured in this toolkit have been used with permission.

"When health center leadership commits to the system-wide integration of care, including developing formal partnerships with community based social service organizations to address intimate partner violence, we find they are better positioned to improve health outcomes for the patients they serve." - Judith Steinberg, MD, MPH, Chief Medical Officer, Bureau of Primary Health Care, Health Resources and Services Administration

What are the health and financial consequences of DV/SA?

- DV/SA is a key social determinant of health and impacts your patients: At least 1 in four women have experienced intimate partner violence (IPV) and 1 in 7 men have experienced severe physical violence by an intimate partner.
- Health consequences can be severe. The long term impact of domestic and sexual violence includes physical injuries, chronic health and mental health issues, and high risk health behaviors. Click here for an infographic on the health impact of violence.
- DV/SA is costly and interferes with quality of care. Click here to read more about DV/SA health costs and utilization.
- The U.S. Preventive Services Task Force recommends screening and brief counseling for intimate partner violence (IPV), currently a required women’s preventive service covered by health insurance.
- Evidence-based interventions exist and preventive service codes can be used to bill for brief intervention and counseling.
- The U.S. Centers for Disease Control and Prevention defines intimate partner violence (IPV) as physical violence, sexual violence, stalking and psychological aggression (including coercive acts) by a current or former intimate partner.

Learn additional facts on health and domestic violence.

Why Health Centers?

For millions of Americans, including some of the most vulnerable individuals and families, health centers are essential patient-centered medical homes that promote health and diagnose and treat chronic disease and disability. One in 13 people nationwide rely on a HRSA-funded health center for their health care needs. Click here to locate a health center near you.

Given their enormous reach and overarching goals to promote health and safety, health centers are uniquely positioned to be leaders in violence prevention across the U.S. Many health centers have already partnered with DV/SA organizations to implement health interventions with promising results to achieve better health outcomes for patients navigating the health challenge of DV/SA.

Between 2014-2016, 10 health centers and 10 DV/SA programs across the country participated in the Improving Health Outcomes Through Violence Prevention Pilot Project to identify promising ways to promote the health and safety of patients. The U.S. Department of Health and Human Services, Health Resources and Services Administration, and the Administration for Children and Families funded this project, in collaboration with Futures Without Violence, who provided training and workflow redesign support. Under this pilot, health centers and partnering DV/SA programs tested all steps to address and respond to DV/SA. Key findings are distilled here into actionable steps for other health care providers, administrators, DV/SA advocates, and community partners to easily adapt for their own settings.

Follow these essential steps to integrate a response to IPV in your health center:

1. Build partnerships between health centers and local DV/SA programs.
2. Prepare your practice by implementing a new or updated DV/SA policy to identify and respond to survivors in partnership with community based DV/SA programs, and promote prevention.
3. Adopt the simple evidence-based intervention to educate all patients about the connection between IPV and their health and engage them in strategies to promote wellness and safety. This intervention consists of universal education using a safety card with all patients (see below for instructions).
4. Train providers and all staff on the impact of DV/SA on health outcomes, and how to assess and respond in collaboration with community based DV/SA programs.
5. Evaluate and sustain your progress as part of continuous quality improvement.
We developed a system where women who have been facing violence...can come to [our health center] and we help them to navigate the system. We have a primary partner for DV referral and support, DC SAFE, a crisis center in DC. [The health center] doesn’t provide any DV crisis intervention, but we navigate them to DC Safe. And also when DC Safe deals with a client that needs health care or long term support, they also navigate back to us. Clients that need long term support because they’re dealing with some legal issues...like immigration, or immigration status adjustment...we can also help these women so they’re not standing alone.” - Suyanna Barker, DrPH Community Health Action Department Director, La Clinica del Pueblo (Washington, DC)

DV/SA advocates can connect their clients to primary health care.

Partnerships promote access to health care for female survivors of violence because women seeking services at DV/SA programs may have been prevented from seeking care by their abusive partners. In one study 17% of abused women reported that a partner prevented them from accessing health care compared to 2% of non-abused women.17

DV/SA programs are in a unique position to reach clients as they come in for relationship and safety support. They can:

• inquire about clients’ health and help-seeking on intake forms;
• identify whether the client has a primary health care provider and offer referrals to partnering health centers, informing clients about health center services and sliding scale fees;
• offer onsite basic support such as contraception, pregnancy, and sexually transmitted infection (STI) testing; and
• partner with health centers to offer more robust health services onsite at DV/SA programs.

Health centers participating in the Improving Health Outcomes Through Violence Prevention Pilot Project found that establishing formal partnerships, including memoranda of understanding (MOUs), with community based DV/SA programs, as well as other organizations that support survivors of violence, was crucial to providing trauma informed care for survivors.

“One of our most important accomplishments was having our [domestic violence] advocate on site and available for a warm hand-off and regular communication from the advocate for updates and education” – Keri Scott, former Director of Quality, The Rinehart Clinic, (Wheeler, OR)

1. Build Partnerships

Include DV/SA advocates as part of your multidisciplinary care team/ approach

Domestic and Sexual Violence (DV/SA) advocates offer support, safety planning and coaching to address other social determinants of health

DV/SA responses require a team-based care approach. Local and state DV/SA programs are integral partners to a successful response. Many DV/SA partners are equipped to provide supportive services such as translation, transportation, and legal support which mirror the enabling services offered by health centers. DV/SA programs exist in many communities in which health centers are located and DV/SA advocates can offer a range of support to survivors identified in health centers. Such confidential patient support may include information on healthy and unhealthy relationships; emotional support; emergency and long-term safety planning; and supports related to other social determinants of health including housing, food insecurity and employment as well as court and legal advocacy. Some advocates staff crisis hotlines, run support groups or provide in-person counseling, and some agencies have programs for children. Domestic violence coalitions, local domestic violence programs, tribal domestic violence programs, and culturally-specific community-based organizations are an integral part of any coordinated healthcare and social service response to DV/SA.

Reach out to your local DV/SA program! Click here to find a domestic violence program near you, or contact your state DV coalition or tribal DV coalition.

Supporting staff:
Creating a trauma informed health setting is a critical first step in building a response to IPV. Trauma informed workplaces recognize the needs of both clients and employees. Taking into account the high prevalence rates of IPV, it is likely that some health center employees are also personally affected by IPV and others will experience vicarious trauma.

Develop policies and implement training specific to health center employees:
- Visit [http://www.workplacesrespond.org/](http://www.workplacesrespond.org/) to view an online toolkit for building workplace responses to IPV including a tool that allows customization of a protocol for staff exposed to violence.
- Click here for a presentation for staff on vicarious trauma and self-care strategies.

“At the beginning of our IPV work we first offered information and resources for employees on vicarious trauma, including developing a support group just for staff, and because of that we were able to build staff resiliency before addressing IPV with patients.”
—Sara Gavin, LMFT, LPCC, Director of Behavioral Health, CommuniCare Health Centers (Woodland, CA)

2. Prepare Your Practice
There are six steps to prepare your practice:
- Build buy-in for your DV/SA program
- Support staff in addressing their own experiences of violence
- Create or update policies or protocols on DV/SA
- Measure quality improvement
- Enhance the clinic environment by displaying patient and provider tools
- Document and code

Build buy-in for your DV/SA program: You will need support from all staff levels of your health center to create a sustainable and effective response to IPV. This includes CEOs, Board Members, clinicians, peer educators, billing and front desk staff. Identify one or more champions for your program to build and maintain buy in. Consider engaging a leader from the staff level and one from the provider level to lead and manage changes. This toolkit provides the designated champions all of the necessary tools to support their engagement.

Sample slide presentation for CEOs and Board Members on why health centers should create a response to DV/SA and the steps to get started.

Sample workflow that outlines each staff person’s role – from the front office to the exam room – in responding to DV/SA.

Sample blog posts for October Domestic Violence Awareness Month and April Sexual Assault Awareness Month

Build Partnerships: Domestic Violence/Sexual Assault Advocates
Receiving Warm Referrals from Health Partners
Serving as the primary referral from your partnering health center increases patients’ access to DV/SA services. Offer trainings and continuing education with the health center to introduce your agency’s services and staff, along with the dynamics, prevalence, and health impact of IPV. Trainings for your partner will better equip providers and staff to address and respond to IPV at their health center.

Providing Health Services
Promote survivor health at your agency by offering important health services such as reproductive health resources, pain medication, and rapid HIV testing. Reflect a culture of health for your clients and staff through wellness classes, healthy food options, and info on health coverage and care. Another way that DV/SA advocates can promote health is by talking with survivors about reproductive coercion and offering reproductive health services like pregnancy tests, contraception, and condoms.

See our full toolkit on “Integrating Health Services into Domestic Violence Programs”

“Noemi [patient advocate at Mariposa Health Center] and Mercedes [domestic violence advocate at Catholic Community Services] have come together to not just provide single advocacy on the DV side…but also advocacy on the client care/health side. They enhanced [available] resources, they broadened those support circles…and in a small community you definitely need as much as help as you can get because sometimes the resources are slim to none.”—Lisa Silva, Program Director, Catholic Community Services (Sierra Vista, AZ)

Tools to Build a Successful Partnership

Memorandum of Understanding (MOU): It is critical for health centers and DV/SA programs to form solid partnerships in anticipation of future needs. Roles and responsibilities of each organization should be clearly identified; establishing an MOU is one of the best tools to use.

Sample MOU

Tips on how to partner with DV/SA programs
Create or update policies and protocols on DV/SA: It is critical to establish or update your protocol on DV/SA by identifying roles and responsibilities for staff, establishing a policy to see patients alone, and implementing uniform standards for documentation and reporting. Examples of adaptable protocols from health centers from across the U.S. are featured below.

View [sample Health Center IPV Protocols](#) that you can adapt for your own setting.

View a [video vignette](#) on the importance of seeing patients alone for part of every visit.

“A key success for us in supporting survivors was helping the health center establish a ‘see patients alone’ policy”

—Emily Fanjoy, Health Programs Project Coordinator, Tillamook County Women’s Resource Center (Tillamook, OR)

**Quality Improvement:** Work with your quality improvement staff or committee to establish a baseline assessment of the quality of care currently provided to survivors of DV/SA. Identify appropriate tools to measure progress such as the following [Quality Assessment/Quality Intervention (QA/QI) tool](#). Complete the tool at initial DV/SA program implementation, at the 6 month mark, and again as needed to measure change, address barriers, and evaluate sustainability. The QA/QI tool can also help inform the development of your protocol.

**Enhance the clinic environment by displaying patient and provider tools:** Research shows that creating a supportive environment helps survivors feel more comfortable talking about violence. Hang posters in lobbies and exam rooms with IPV prevention and health messages; stock safety cards in exam rooms and bathrooms; and consider other culturally appropriate patient and provider tools.

**Documentation and Coding:** Be sure to train providers and the billing team on how to document and code for DV/SA as well as how to implement important privacy protections for what information gets shared about IPV. Current Procedural Technology (CPT) and International Classification of Diseases (ICD) codes are available for age appropriate counseling and risk factor reduction interventions as well as codes to record assessment and counseling for IPV.

- [Sample Preventive Service Codes and Privacy Principles](#)
- [Recommendations for Documentation](#)
- [Considerations for explanation of benefits](#)

---

**3. Adopt the Evidence-Based Intervention**

**What works?** Educate all patients about the connection between IPV and their health and engage them in strategies to promote wellness and safety. The following are evidence-based steps that a multi-disciplinary care team can take to educate all patients on IPV, while also promoting prevention.

**Evidence-based intervention on screening and brief counseling for DV/SA:** The following are evidence-based steps that a multi-disciplinary care team can take to conduct screening and brief counseling on IPV, while also promoting prevention:

**Use the CUES intervention**

1) **Confidentiality:** disclose limits of confidentiality
2) **Universal Education:** provide universal prevention education on connection between IPV and health as well as direct inquiry
3) **Empower:** patients who disclose abuse with patient centered harm reduction strategies
4) **Support:** provide a warm referral to DV/SA agencies

**Why universal education?** It is important to address universal prevention education on the elements of healthy and unhealthy relationships and the impact of violence on health. Even when asked directly by skilled providers, women may not disclose abuse for reasons including distrust and concern for subsequent violence. One study asked what advice women who had experienced IPV would give health providers regarding how to ask about and discuss the issue of IPV. The study advised that providers (1) give a reason for why they are asking about IPV to reduce women’s suspicions and minimize stigma, (2) create an atmosphere of safety and support, (3) provide information, support and access to resources regardless of whether the woman discloses IPV, They emphasized that a provider’s asking about IPV is an opportunity to raise patient awareness of IPV, communicate compassion and provide information and not merely a screening test to diagnose a pathologic condition.

---

Combining universal education on IPV (regardless of a disclosure on any screening tool), brief trauma-informed harm reduction strategies, and supported referrals is beneficial (i.e., offering access to an onsite DV/SA advocate, offering use of the phone in clinic to call a local resource, etc.). Education about IPV, harm reduction and warm referral to DV/SA advocacy services (regardless of disclosure and case identification) are often overlooked elements of a comprehensive health sector response which increase safety, reduces violence, and improves clinical and social outcomes.

**Tools to Promote Universal Education:**

**Safety Cards:** Multi-lingual and population specific patient education cards. The resources panel may be localized by adding in a local DV/SA hotline number, health center logo, or other local resources for support. To learn more contact the Health Resource Center on Domestic Violence.

**Additional Tools:**

**Survivor Health Brochure:** Trauma-informed health care tips for those who have survived childhood or adult violence or abuse and have difficulty going to their nurse practitioner, doctor, physician assistant, dentist, or other health care providers.

### 4. Train Providers and All Staff

**Promote team-based care by training the entire health center**

Health centers participating in the Improving Health Outcomes Through Violence Prevention Pilot Project found that training all staff—from the front desk to physicians—promotes team-based care and was a key part of their success in sustaining a comprehensive response to IPV. Training all staff also increases awareness of workplace policies and support available to employees facing IPV.

Before introducing health center staff to DV/SA assessment, universal education and response (mentioned above) related to patients, first educate staff on IPV resources and referrals specific to employees. A partnering DV/SA advocate may help develop a workplace policy; offer training to health center staff; facilitate a wellness/resiliency staff support group; or serve as a primary referral for staff requesting support. They may also help offer education on the dynamics of DV/SA; vicarious trauma; self-care; and discuss institutional supports that help promote staff resiliency.

**Key elements of clinical training:**

- The health center’s commitment to IPV system change, goals and timeline;
- Introduction of partnering local DV/SA advocate(s) and DV/SA advocacy services available to employees and clients;
- Vicarious trauma and staff self-care;
- Dynamics of DV/SA and prevalence;
- Physical and emotional health impact of abuse;
- Case examples to build clinical skills on how to offer universal education on healthy and unhealthy relationships;
- Assessment for abuse and harm reduction strategies including warm referrals to local DV/SA programs; and
- Information on documentation, reporting as needed and quality improvement.

A partnering DV/SA advocate may help deliver such training and education, in collaboration with IPV leaders at the health center, or other expert trainers.

“We have complete revamped our intake process. Because of the conversations from the training that we have had we dramatically increased the number (and effectiveness) of questions about health. We’re looking at our clients’ needs holistically. We’re sending the clients a message that it’s safe to talk about those issues here.” – Maria Cancel, LMHC, Brockton Neighborhood Health Center (Brockton, MA)
“Implementing morning huddles and changes to our EHR have helped us to focus on how we can consistently support IPV survivors.” - Abner Santiago, LPC, Behavioral Health Consultant, La Comunidad Hispana (Kennett Square, PA)

Tools to support sustainability and quality improvement:
- Quality improvement tools
- Reflective supervision questions
- Safeguarding health information in explanation of benefits
- Coding recommendations and privacy principles for documentation of DV

By doing this work, health centers are demonstrating their commitment to patient-centered care by helping to prevent IPV before it begins and by recognizing the impact IPV has on health. Working together and coordinating efforts with community-based programs help reduce isolation and improve health and safety outcomes for IPV survivors. Our vision is a future without violence that provides education, safety, justice, and hope for all.

5. Evaluate and Sustain Your Progress

Include IPV as a health center quality improvement goal.

Conduct Quality Improvement and Create Sustainable Programs:
Monitor quality of care by revisiting your Quality Assessment/Quality Improvement (QA/QI) tool, mandating training for all new staff and offering refresher training annually for all staff. Support staff as they implement the new DV/SA protocol through case consultations in morning huddles and reflective supervision. As your program advances, consider evaluating the impact your partnerships have on health outcomes of clients and conduct data review with other measures already collected and assess for opportunities to align efforts with other existing priorities. Also work to integrate prompts and resources into your electronic health record and monitor your health IT systems to ensure privacy protections are being enforced to keep patient data safe and secure. Every year, revisit partnerships, policies, and formal memoranda of understanding (MOUs), with community-based DV/SA programs, as well as other or new organizations to support survivors of violence, with an aim to ensure crucial partnerships are in place to provide trauma-informed care to survivors.

Keep the issue current and celebrate successes by featuring stories in health center newsletters, blogs, or at events.

Futures Without Violence staff wishes to thank the leaders from the Improving Health Outcomes Through Violence Prevention Pilot Project for informing this toolkit: Lisa Ambrose, Tiffany Flowers, Lisa Silva, Clara Vasquez, Celina Alvarez, Ana Soltero, Ruth Zakarin, Vanessa Volz, Kelly Henry, Heather Martin-Thomas, Emily Fanjoy, Erin Richardson, Maria Cancel, Sara Gavin, Tegwin Millard, Barb Boehler, Diane Sorenson, Abner Santiago, Yara Castro, Noemi Elizalde, Keni Scott, Marge Jozsa, Annajane Yolken, and Meghan Gilleylen.

Special thanks to the evaluation partners, Dr. Elizabeth Miller and Claire Raible at the Division of Adolescent and Young Adult Medicine, Children’s Hospital of Pittsburgh, UPMC, for their guidance throughout this project. We also want to thank the Bureau of Primary Health Care and Office of Women’s Health within the Health Resources and Services Administration: Sabrina Matoff-Steppe, Jane Sagebrecht, Preeta Chidambaran, Nadra Tyus, Keisher Highsmith, Christina Lachance, Toss Joseph, and Harriet McCombs; staff at the Administration for Children and Families, Family Violence Prevention and Services Program: Marylouise Kelley, Rebecca Odor, Mao Yang and Kenya Fairley; and Christine Heyen and Sarah Keefe from Oregon Safer Futures for their collective wisdom, guidance and support throughout this project and their unwavering commitment to improving the health and well-being of survivors of DV/SA.

Tools to Train Staff:
The following tools were designed to support health centers get started by holding short (1 hour) staff trainings or up to ½ day or full-day trainings. Tools include PowerPoint decks, short video vignettes, fact sheets and clinical guidelines.

- PowerPoint training decks for various health settings:
  - Primary Care
  - Adolescent health
  - Reproductive health

- HIV and Ryan White dually-funded programs: Includes an HIV-specific PowerPoint training deck, fact sheet, safety card, and other resources

- Training videos for health settings

- Clinical guidelines:
  - Reproductive health settings
  - Adolescent health settings

- Training curricula for domestic violence programs partnering with health centers

- CUES Intervention Graphic (in development)

- National trainings such as the biennial National Conference on Health and Domestic Violence offer training and education opportunities for health center staff and DV/SA advocates.

“Implementing morning huddles and changes to our EHR have helped us to focus on how we can consistently support IPV survivors.” - Abner Santiago, LPC, Behavioral Health Consultant, La Comunidad Hispana (Kennett Square, PA)

Tools to support sustainability and quality improvement:
- Quality improvement tools
- Reflective supervision questions
- Safeguarding health information in explanation of benefits

1. What is intimate partner violence (IPV)?

**Answer:** Domestic violence is the willful intimidation, physical assault, battery, sexual assault, and/or other abusive behavior as part of a systematic pattern of power and control perpetrated by one intimate partner against another. It includes physical violence, sexual violence, psychological violence, and emotional abuse. The frequency and severity of domestic violence can vary dramatically; however, the one constant component of domestic violence is one partner’s consistent efforts to maintain power and control over the other. Learn more about the dynamics, signs, and prevalence of domestic violence here: [http://www.ncadv.org/learn-more/what-is-domestic-violence](http://www.ncadv.org/learn-more/what-is-domestic-violence)

2. What is sexual violence (also referred to as sexual assault)?

**Answer:** Sexual violence is defined by the Center for Disease Control as: A sexual act committed against someone without that person’s freely given consent. Sexual violence is divided into the following types:
- Completed or attempted forced penetration of a victim
- Completed or attempted alcohol/drug-facilitated penetration of a victim
- Completed or attempted forced acts in which a victim is made to penetrate a perpetrator or someone else
- Completed or attempted alcohol/drug-facilitated acts in which a victim is made to penetrate a perpetrator or someone else
- Non-physically forced penetration which occurs after a person is pressured verbally or through intimidation or misuse of authority to consent or acquiesce
- Unwanted sexual contact
- Non-contact unwanted sexual experiences

Read more here: [https://www.cdc.gov/violenceprevention/sexualviolence/definitions.html](https://www.cdc.gov/violenceprevention/sexualviolence/definitions.html)

3. What is intimate partner violence (IPV)?

**Answer:** The U.S. Centers for Disease Control and Prevention defines IPV as physical violence, sexual violence, stalking and psychological aggression (including coercive acts) by a current or former intimate partner.

4. What is trauma?

**Answer:** Trauma is a normal reaction to an abnormal situation. “Individual trauma results from an event, series of events, or set of circumstances experienced by an individual as physically or emotionally harmful or life-threatening with lasting adverse effects on the individual’s functioning and mental, physical, social, emotional, or spiritual well-being.”

5. What is vicarious trauma?

**Answer:** Vicarious trauma happens when we accumulate and carry the stories of trauma—including images, sounds, resonant details—we have heard, which then come to inform our worldview.

Learn more here: [http://www.joyfulheartfoundation.org/learn/vicarious-trauma](http://www.joyfulheartfoundation.org/learn/vicarious-trauma)

6. What is a warm referral?

**Answer:** A warm referral, as referred to in the CUES intervention, is a supported referral to DV/SA advocacy services from a health provider, in which the provider is able to offer a patient access to an onsite DV/SA advocate; offer use of the clinic’s phone to call a local resource; or offer the name and phone number so they can reach out independently, etc. Complement a warm referral with a brochure or safety card from a local DV/SA agency, if it is safe for the patient to take home. Ideally, the provider has an established relationship with the DV/SA advocacy program and is familiar with the staff and services available, thus increasing the likelihood of the patient following through with the connection.

7. What is a safety card?

**Answer:** The Health Resource Center on Domestic Violence, a project of Futures Without Violence offers a number of multilingual, low-literacy patient education safety cards that provide information on healthy and unhealthy relationships, their impact on health and list national referrals for support. The evidence-based safety card tool was developed to help clinicians and DV/SA advocates open conversations about DV/SA and healthy relationships with their clients. They are typically a 4-5 panel double-sided tool that folds into a 2.5 x 3 inch card (business-card sized). The Health Resource Center on Domestic Violence offers a number of setting-specific and population-specific safety cards offered [here](https://www.joyfulheartfoundation.org/learn/vicarious-trauma).

8. What is trauma-informed care?

**Answer:** The Substance Abuse and Mental Health Services Administration (SAMHSA) defines a trauma-informed approach to care as: “A program, organization, or system that:
1. Realizes the widespread impact of trauma and understands potential paths for recovery;
2. Recognizes the signs and symptoms of trauma in clients, families, staff, and others involved with the system;
3. Responds by fully integrating knowledge about trauma into policies, procedures, and practices; and
4. Seeks to actively resist re-traumatization.

A trauma-informed approach can be implemented in any type of service setting or organization and is distinct from trauma-specific interventions or treatments that are designed specifically to address the consequences of trauma and to facilitate healing.”

Learn more here: [https://www.samhsa.gov/nctic/trauma-interventions](https://www.samhsa.gov/nctic/trauma-interventions)
9. What is Futures Without Violence? 

**Answer:** For more than 30 years, FUTURES has been providing groundbreaking programs, policies, and campaigns that empower individuals and organizations working to end violence against women and children around the world. Striving to reach new audiences and transform social norms, we train professionals such as doctors, nurses, judges, and athletic coaches on improving responses to violence and abuse. We also work with advocates, policy makers, and others to build sustainable community leadership and educate people everywhere about the importance of respect and healthy relationships. Our vision is a future without violence that provides education, safety, justice, and hope. Learn more [here](https://www.futureswithoutviolence.org).

10. What is the National Health Resource Center on Domestic Violence? 

**Answer:** For more than two decades, the National Health Resource Center on Domestic Violence has supported health care professionals, domestic violence experts, survivors, and policy makers at all levels as they improve health care’s response to domestic violence. The center offers personalized, expert [technical assistance](https://www.thehotline.org) via email, fax, phone, postal mail and face-to-face at professional conferences and meetings around the nation. Contact us at health@futureswithoutviolence.org or call 415-678-5500.

11. Domestic Violence and Sexual Assault (DV/SA) programs: What are they and where can I find one? 

**Answer:** Many DV/SA partners are equipped to provide supportive services such as translation, transportation, and legal support which mirror the enabling services offered by health centers. DV/SA programs exist in many communities in which health centers are located and DV/SA advocates can offer a range of support to survivors identified in health centers. Such confidential patient support may include information on healthy and unhealthy relationships; emotional support; emergency and long-term safety planning; and supports related to other social determinants of health including housing, food insecurity and employment as well as court and legal advocacy. Some advocates staff crisis hotlines, run support groups or provide in-person counseling, and some agencies have programs for adolescents and children. In some instances, a community may only have one such program available to support DV/SA survivors and their families. However, other communities may operate both a domestic violence program and a distinct sexual assault program.

The National Hotline on Domestic Violence can help identify local programs and offer safety planning assistance to survivors, concerned family members, or professionals working with clients who need help. The Hotline is staffed by DV/SA advocates available to talk 24/7 at 1-800-799-SAFE (7233) in over 170 languages and online: [www.thehotline.org](http://www.thehotline.org). All calls are confidential and anonymous. There is also a national helpline for Native American communities, the StrongHearts Native Helpline, 1-844-7NATIVE (1-844-762-8483) Monday through Friday, from 9 am to 5:30 pm CST. The StrongHearts Native Helpline is a culturally-appropriate, confidential service for Native Americans affected by domestic violence and dating violence. You may also contact your [state domestic violence coalition](https://www.rainn.org) or [tribal coalition](https://www.navajo-rose.org) to find a local domestic violence program near you. Additionally, RAINN (Rape, Abuse & Incest National Network) operates the National Sexual Assault Hotline (800.656.HOPE) and [www.rainn.org](http://www.rainn.org) (with a live chat) in partnership with more than 1,000 local sexual assault service providers across the country.

12. What languages are your materials available in? 

**Answer:** Materials and tools are primarily available in English; some are available in Spanish, Chinese, Tagalog, and other languages. Materials are also tailored for LGBTQ communities, American Indian/Alaska Native communities and others. See all culturally specific tools [here](https://www.futureswithoutviolence.org). 

13. Do you provide training onsite? 

**Answer:** As a national program, we are unable to provide onsite trainings, but contact us at health@futureswithoutviolence.org to see how we can best support your training needs. The Health Resource Center on Domestic Violence offers a number of training curricula and other tools to facilitate trainings in addition to hosting a biennial annual [National Conference on Health and Domestic Violence](https://www.futureswithoutviolence.org) and an ongoing webinar series, where you can learn more about promising practices and research in the field. 

14. What screening tool is best to use in our EHR? 

**Answer:** We support a universal education approach—talking to all patients about the health impact of IPV, in addition to asking direct questions about current and past experiences of IPV. Universal education also provides patients with resources of where to get help if they need it, and offering brief counseling and a warm referral to a DV/SA advocate in the event of a disclosure. Universal education can be combined with screening tools that are integrated into the electronic health records (EHRs). The US Preventive Services Taskforce also recommends a number of screening tools, including [Hurt, Insult, Threaten, Scream (HITS)](https://www.futureswithoutviolence.org) (English and Spanish versions); [Slapped, Threatened, and Throw (STaT)]; and [Humiliation, Afraid, Rape, Kick (HARK)].

15. How often should I screen for and offer universal education on IPV? 

**Answer:** Everyone deserves to have respectful and caring relationships and anyone can be a victim of intimate partner and sexual violence. LGBTQ people experience IPV at rates similar to or higher than heterosexual women—another reason to talk to all patients about the health impact of IPV and available resources. All patients can benefit from universal education about the health impact of healthy and unhealthy relationships. Because the majority of IPV survivors are women, most health centers begin offering universal education and screening to just women later expanding to all patients once the practice has been solidified.

16. What does it mean to be a survivor of domestic violence/sexual assault (DV/SA)? 

**Answer:** The terms ‘victim’ or ‘survivor’ may be used to refer to a person who has experienced or is experiencing domestic violence/sexual assault (DV/SA). Some organizations or individuals use the terms interchangeably while others feel that the terms ‘victim’ and ‘survivor’ have very different connotations. It is important for providers to let individuals label their own experience and to mirror this language. We largely use the term ‘survivor’ in this toolkit.
17. What are the health care reporting requirements for IPV in my state, tribe, or U.S. territory?

Answer: Click here for a Compendium of State and U.S. Territory Statutes and Policies on Domestic Violence and Health Care.

18. How can I protect survivor privacy and still promote improved health?

Answer: Federal legislation and state and local statutes are crucial to establishing a comprehensive baseline of regulations and protections for the use and disclosure of sensitive electronic information. Health information technology (HIT) developers and vendors also have a role in building the software and hardware necessary to deal with the information in an appropriate fashion.

Here are guiding principles that should be applied by clinicians, administrators, policy makers, and developers when designing, building, or regulating health information systems that will hold or exchange sensitive health information. These principles build on past work to protect information collected in paper health records, and expand the consideration to electronic health records and health information exchanges.

19. What resources are available for American Indian/Alaska Native (AI/AN) communities?

Answer: The National Health Resource Center on Domestic Violence offers a number of resources tailored specifically for American Indian and Alaska Native (AI/AN) communities, including safety cards, posters, and a Promising Practices Report. Visit here to learn more about our work with AI/AN communities, and click here to order hard copies and download PDFs of our materials. See also www.niwrc.org, the National Indian Resource Center Addressing Domestic Violence and Safety for Indian Women.

There is also a national helpline specifically for Native American survivors of domestic violence or dating violence, the StrongHearts Native Helpline, 1-844-7NATIVE (1-844-762-8483) Monday through Friday, from 9 am to 5:30 pm CST.

20. What resources are available for Lesbian, Gay, Bisexual, Trans and Queer (LGBTQ) and Gender-non-conforming (GNC) communities?

Answer: The National Health Resource Center on Domestic Violence offers a number of resources tailored specifically for LGBTQ/GNC communities, including safety cards and posters. Visit here to learn more about our resources for working with LGBTQ/GNC communities, and order materials here.

Also get more information at the LGBTQ DV Capacity Learning Center at The NW Network.
